

If logs are not correct, graphs are wrong or pages are not showing up when you click on page as expected see bullet points below.

For Example you click on Variables and it shows Event Log.

- Open Microsoft Internet Explorer and Click on **“Tools”**
- Select **“Internet Options...”**
- “Internet Options” box will open as shown below
- Under “Temporary Internet files” Click on **“Settings...”**
- “Settings” box will open up as shown below
- Select **“Every visit to the page”**
- Click **“OK”** in “Settings” box
- Try Diamond Link or Netcom. Pages should now link to correct page and data should be correct and current.
