Mitsubishi Electric Power Products, Inc. and CoreSite to Present Case Study at DatacenterDynamics Converged New York

Warrendale, Pa. – March 11, 2013 – Mitsubishi Electric Power Products, Inc. and CoreSite will join forces at DatacenterDynamics Converged New York this week to present a case study entitled “CoreSite Reduces TCO for its Data Center.” The conference will be held on March 12, 2013 at the Marriott Marquis on Times Square.

Billie Haggard, senior vice president of datacenters for CoreSite and John Steele, inside sales manager for Mitsubishi Electric Power Products, Inc. will present the case study. The presentation will discuss how CoreSite selected Mitsubishi Electric Power Products’ 1.5 MW Uninterruptible Power Supply (UPS) system for its 60,000 square-foot, state-of-the-art co-location facility in Santa Clara, Calif. With respect to redundancy, the UPS can be configured as an N+1 or 2N system, which allowed CoreSite to scale power requirements to its customers’ needs.

The case study will include specific metrics regarding costs of equipment, installation, and operation. The presentation will also provide specifics on the system’s low total cost of ownership, including numbers substantiating the system’s efficiency and reduced installation time afforded by the unique multi-module design of Mitsubishi’s MegaPod® system.

About Mitsubishi Electric Power Products, Inc. UPS Division

Since 1964, Mitsubishi Electric has manufactured precision-engineered, high quality uninterruptible power supplies to protect its customers’ mission-critical equipment during times of power instability. Mitsubishi Electric leads the industry in designing and manufacturing reliable, environmentally-friendly UPS systems to extend uptime, prevent data loss and protect against power surges. Mitsubishi Electric Power Products’ UPS division offers systems in both single- and multi-module configurations and a broad range of kVA capacities. Visit www.meppi.com for more information.
